HTTP-5222-ONB  
Full-Stack Web Development: Assignment 2  
Checkpoint  
March 23, 2024

I think I misunderstood the intention of the assignment with my prior checkpoint submission and would like to propose a revised idea:

I will use the following APIs:

<https://www.marketaux.com/>  
Which provides stock market and financial news

and

<https://www.alphavantage.co/>  
Which provides historical stock market data

I can search using a stock symbol on both APIs, I will build an app that displays recent news articles and recent stock information from a single form submission from a user.
